Sustainability Statement

At True Story Brewing Co., sustainability is a key consideration in everything we do. From the way we power our brewery to how we source, brew, and distribute our beer, we're committed to reducing our environmental impact and supporting our local community.

Local Ingredients & Community Focus

While our hops are sourced from further afield to achieve the quality and flavour our beers are known for, we proudly use local maltsters based just down the road in Warminster and work closely with nearby suppliers wherever possible. Supporting local businesses keeps our supply chain transparent, reduces transport emissions, and strengthens our regional economy.

Energy Efficiency

Our brewery is powered in part by on-site solar panels, helping us reduce reliance on grid energy and lower our carbon footprint. Every pint we produce benefits from renewable power captured right above our heads.

Water Recycling

We've invested in systems that recycle water throughout our brewing process, reducing waste and ensuring more efficient use of this vital resource. Every drop counts, and we're proud to be making ours go further.

Co2 & Circular Economy

The Co2 we use comes from a supplier on the same industrial estate, minimising transport emissions and supporting a circular local economy.

Waste & Recycling

We recycle as much as we can, from packaging materials to by-products of the brewing process. Our spent grain and waste products are sent to create biofuel, ensuring nothing goes to landfill. We also partner with a local waste company that shares our sustainability values.

Our Commitment

We know sustainability is an ongoing journey. As we grow, we're continually exploring new ways to brew responsibly, reduce emissions, and contribute positively to our local community.
